Rock Solid Knowledge

Environmental Impact Report

In the last year we have used 2,3439 kw of electricity, created 0.108896667 tonnes of landfill waste, 0.036616667 tonnes of recycled waste and used 13.2 m^3 of water.

Within this time, we've part-returned to office working, with most employees working from our HQ 2 days a week. We know that we need to mitigate this impact.

- We've worked with our Landlord to switch our energy provider to a green energy supplier,
- We're using smart smitches for all devices possible,
- Our cisterns now contain HypoBlocks,
- and we're trialling the use of Framework Laptops to mitigate our electrical waste (which is disposed of using a trusted electrical waste company)

We've also created an environmental procurement policy and a guide for our employees kitting out their homeworking offices. And all of this rests on our [Environmental Policy Statement](#).
